

Analytics Backup by QA

Setup Guide

November 30, 2023

In this guide, we refer to "Analytics Backup by QA" as "GABQ" for short.
"WP" is an abbreviation for "WordPress."
Google Universal Analytics may be abbreviated as 'UA'.

Before Setting Up “Analytics Backup by QA”	2
Analytics Backup by QA Setup	3
1. Install Analytics Backup by QA to WP	3
2. Register Email	3

Updates of Analytics Backup by QA	18

Before Setting Up “Analytics Backup by QA”

Check

- I have thoroughly read and understood the Preparation Guide.
- I have configured server and communication settings according to the Preparation Guide.
- I have prepared the WordPress environment following the Preparation Guide.
- I have downloaded the zip from the software download page.

▼ Preparation Guide

https://ga-backup.com/wp-content/uploads/gabq-preparation-guide_EN.pdf

▼ Software Download Page

<https://ga-backup.com/en/gabqdownload/>

The password for the page can be found in the email sent to you under the subject "[Analytics Backup by QA] Your License and Download Information."

Analytics Backup by QA Setup

Make sure to read the Preparation Guide beforehand and configure your environment before starting the backup process.

* Have many licenses?

You need to set up Analytics Backup by QA in each WordPress.

1. Install Analytics Backup by QA to WP

- 1) Login to WordPress admin.
- 2) Go to "Plugins" > "Add New" > "Upload Plugin", then upload the zip file (gabq.zip).
- 3) Activate the plugin.

* Have many licenses?

Upload the zip file to each WordPress.

2. Register Email

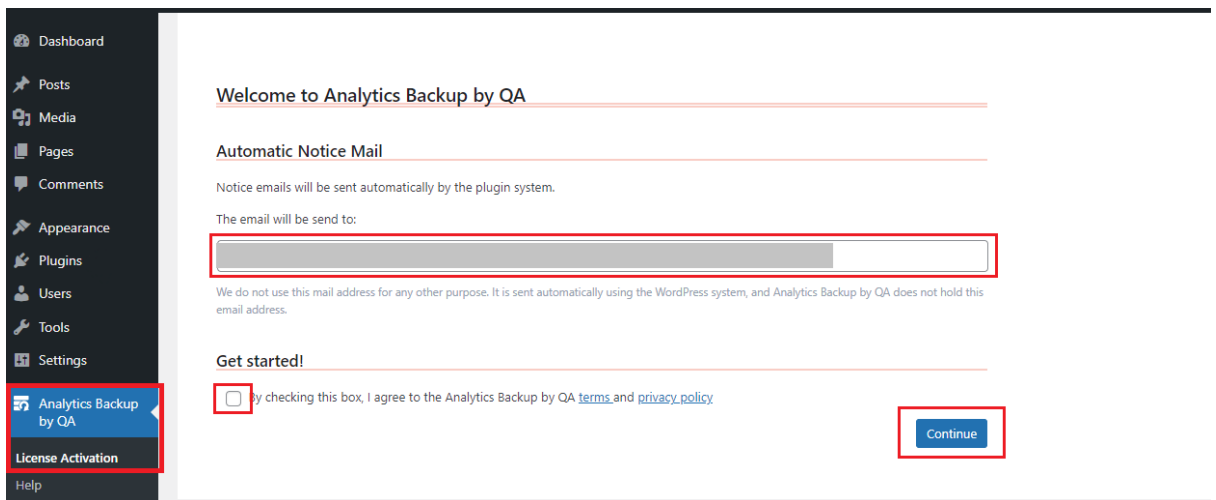

Go to "License Activation" and register your email.

Notice email would be sent to you.

The WordPress administrator's address is initially entered, but you can change it to any address you want. Enter the address you want to receive the notification email. (It does not have to be the same as the email address for the license in Step 3-3 below.)

* Have many licenses?

If you have more than one license, you can set up different email addresses for each GABQ.

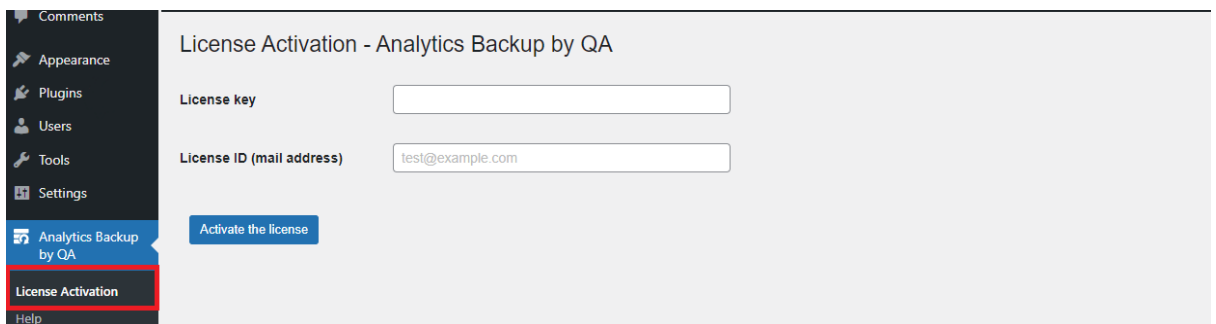

3. GABQ License Activation

Enter the "License Key" and "License ID (email address)" that we sent you and click "Activate the license".

* Have many licenses?

License keys that have been activated on another GABQ cannot be used. Make sure you authorize the right license key for the license content you want to use for that WP.

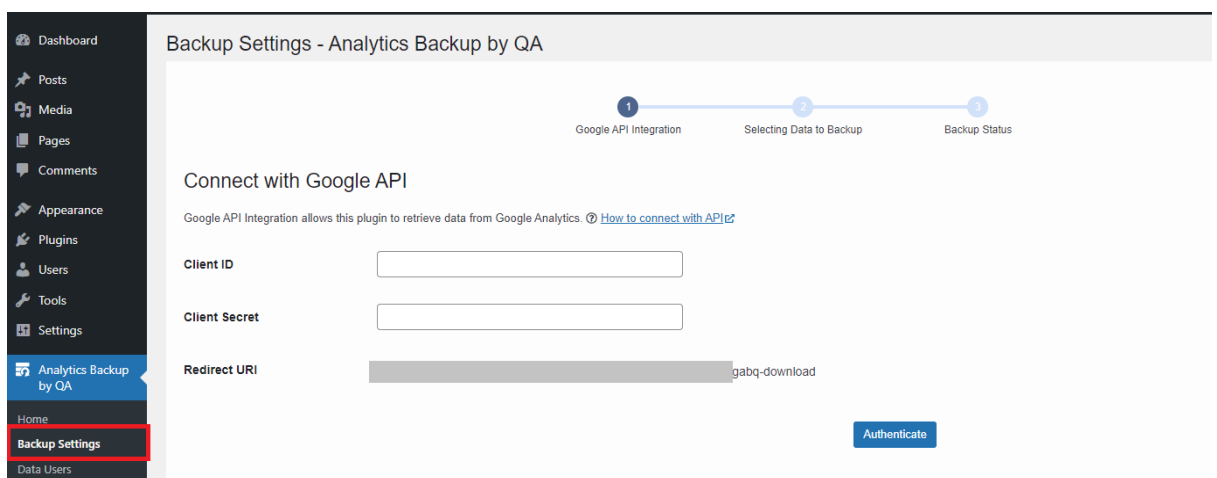

4. Google API Integration (Backup Settings ①)

GABQ needs to integrate with Google API to get (back up) your data from UA.
Client ID and client secret created at Google Cloud are required for linkage.

* Have many licenses?

There is one WP = "one redirect URI" for one license. It is recommended to create a project for each WP.

See also "Preparation Guide - Step 1. How many Google Cloud projects should I create?"

(1) Create a project on Google Cloud.

Enable "Google Analytics API" and "Google Analytics Reporting API" libraries.
The redirect URI is shown on GABQ > Backup Settings.

▼ How to:

① Use Chrome browser and sign in with your Google account

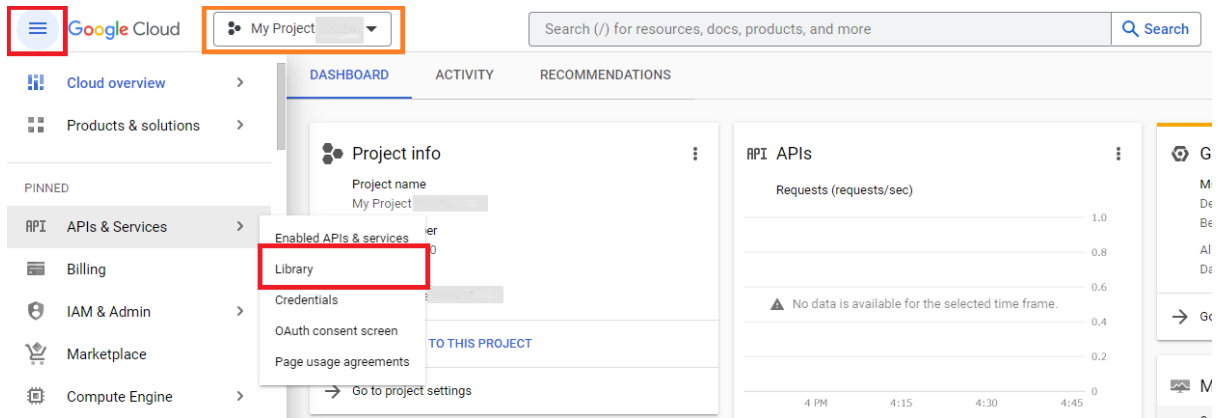

② Go to Google Cloud > Manage resources

<https://console.cloud.google.com/cloud-resource-manager>

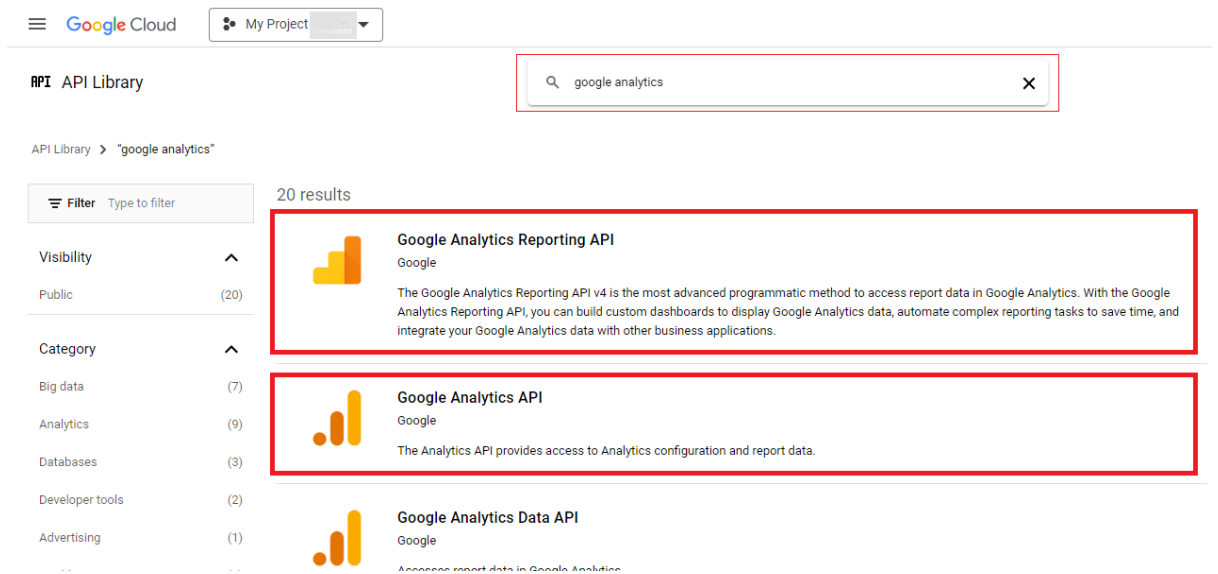

③ Create a project

④ Select the project. Click [Navigation menu] > [API & Services] > [Library]

⑤ Enable "Google Analytics API" and "Google Analytics Reporting API" libraries. Search by the words "google analytics" would help.

Select and enable the APIs. You may need to do it one by one. Make sure you enable both of them.

- Enabled "Google Analytics Reporting API"
- Enabled "Google Analytics API"

⑥ Go to [API & Services] > [OAuth consent screen]

⑦ Choose "External" for User Type and click "CREATE"

Google Cloud My Project Search (/) for resources, docs, products, and more Search

API APIs & Services OAuth consent screen

Enabled APIs & services
Library
Credentials
OAuth consent screen
Page usage agreements

Choose how you want to configure and register your app, including your target users. You can only associate one app with your project.

User Type

Internal ⓘ

Only available to users within your organization. You will not need to submit your app for verification. [Learn more about user type](#)

External ⓘ

Available to any test user with a Google Account. Your app will start in testing mode and will only be available to users you add to the list of test users. Once your app is ready to push to production, you may need to verify your app. [Learn more about user type](#)

CREATE

[Let us know what you think](#) about our OAuth experience

⑧ Edit app registration.

① OAuth consent screen

- App information
 - App name ... Enter a name you want to.
 - User support email ... Select your Google account email address.
 - App logo ... Ignore.
 - App domain ... Ignore.
 - Developer contact information ... Enter an email address.
- Then, SAVE AND CONTINUE.

② Scopes

Just SAVE AND CONTINUE.

③ Test users

Just SAVE AND CONTINUE.

④ Summary

Confirm what you have entered and BACK TO DASHBOARD

OAuth consent screen — Scopes — Test users — Summary

App information
This shows in the consent screen, and helps end users know who you are and contact you.

App name *
The name of the app asking for consent

User support email *
For users to contact you with questions about their consent

App logo
This is your logo. It helps people recognize your app and is displayed on the OAuth consent screen.
When you upload a logo, you will need to submit your app for verification unless the app is configured for internal use only or has a publishing status of "Testing". [Learn more](#)

App domain
To protect you and your users, Google only allows apps using OAuth to use authorized domains. The following information will be shown to your users on the consent screen.

Application home page
Provide users a link to your homepage

Application privacy policy link
Provide users a link to your public privacy policy

Application terms of service link
Provide users a link to your public terms of service

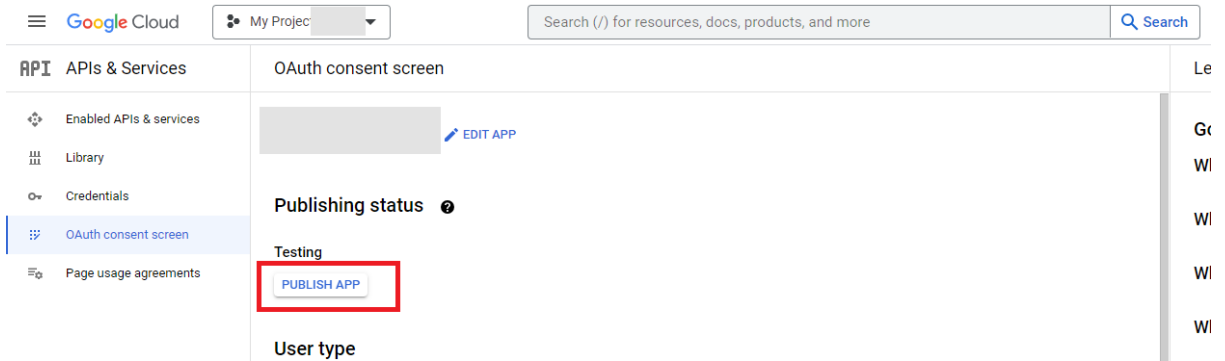

Authorized domains ⓘ
When a domain is used for development or in an OAuth consent configuration, it is not an authorized domain. If your app needs to go through verification, please go to the [Google Cloud Console](#) where your domains are authorized. [Learn more](#) about the authorized domain list.

+ ADD DOMAIN

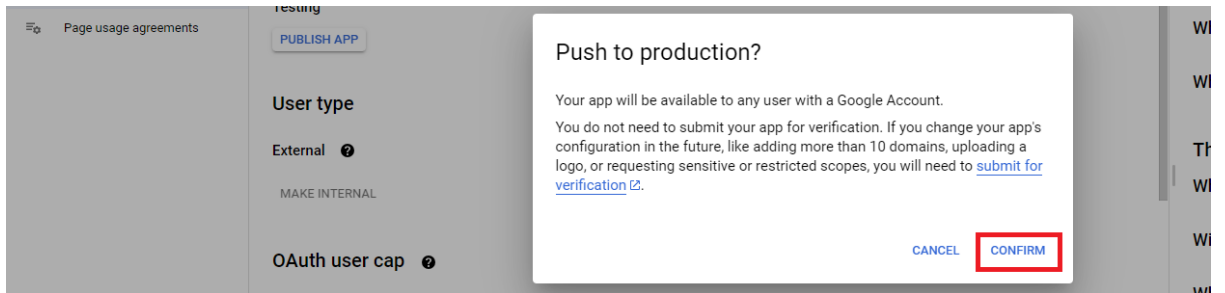

Developer contact information
Email addresses *
These email addresses are for Google to notify you about any changes to your project.

SAVE AND CONTINUE CANCEL

⑨ Publish the app.

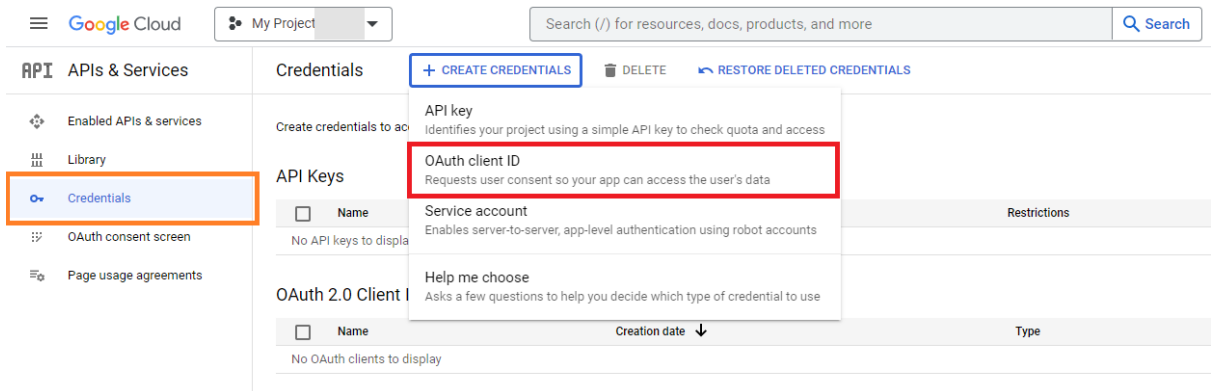

You may be asked whether to push to production when publishing the app. Confirm it.

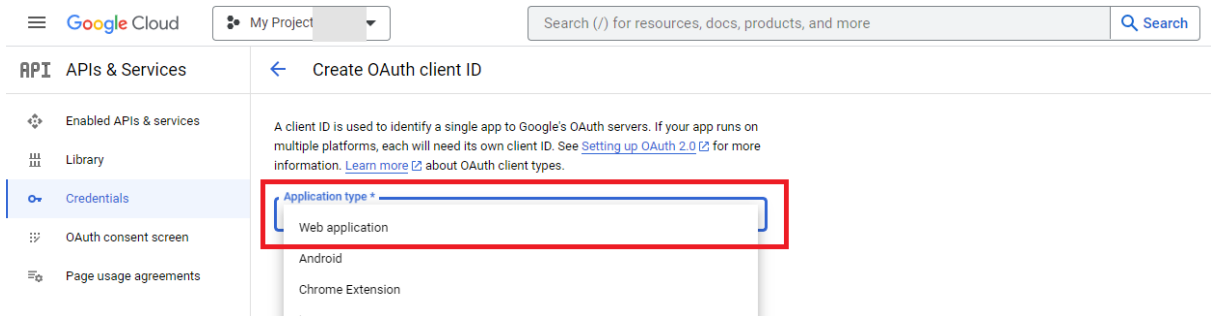

⑩ Go to [Credentials]

Click [CREATE CREDENTIALS] > [OAuth client ID]

⑪ Create OAuth client ID.

① Select "Web application" for Application type.

A client ID is used to identify a single app to Google's OAuth servers. If your app runs on multiple platforms, each will need its own client ID. See [Setting up OAuth 2.0](#) for more information. [Learn more](#) about OAuth client types.

Application type *
Web application

Name *
[Input field]

② Name the application.

③ Add an Authorized redirect URI*.

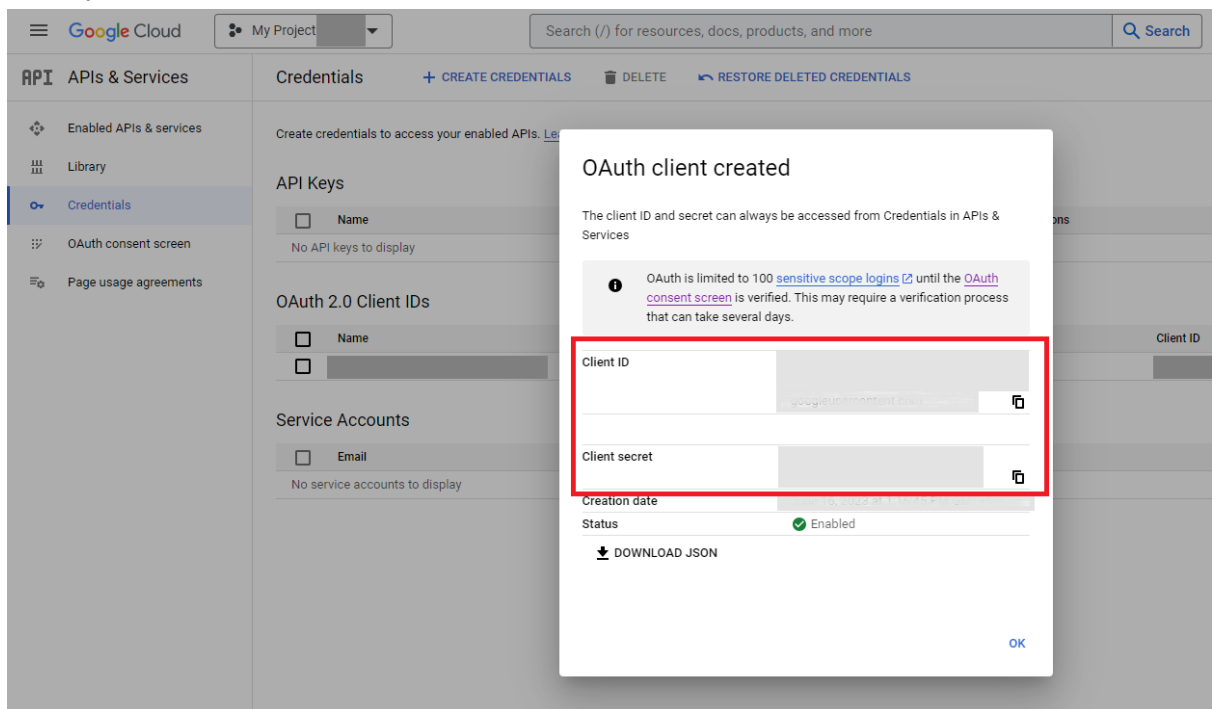

*Copy "Redirect URI" which is on Backup Settings of GABQ and paste it.

④ CREATE.

⑬ Now you have created the project (app) and set OAuth client that is needed for GABQ.

Copy "Client ID" and "Client Secret".

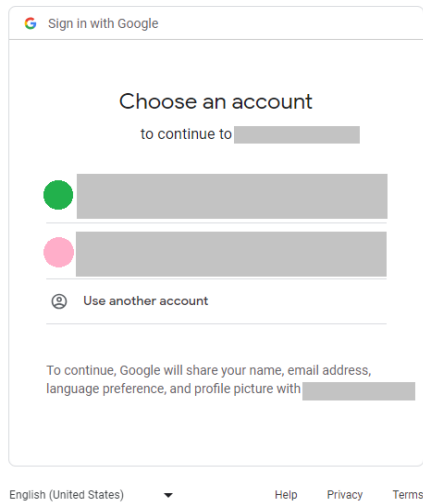

(2) Return to the GABQ Backup Settings, and enter the "Client ID" and "Client Secret" for the project (app) created at Google Cloud.

(3) Click "Authenticate".

(4) When "Sign in with Google" appears, choose your account.

Be sure to choose a Google account that is authorized to view the data to be downloaded.

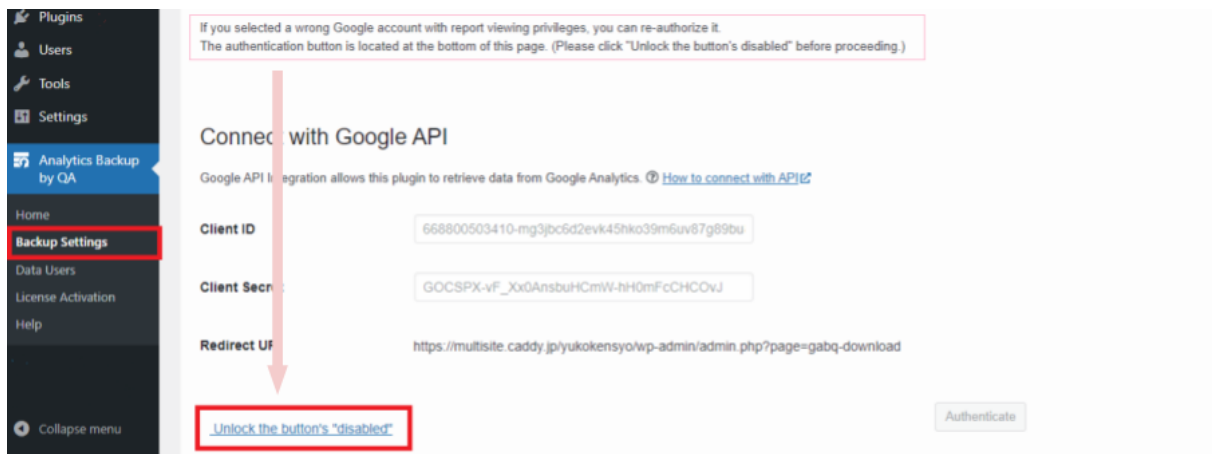

It is estimated to take about 5 to 10 minutes to be able to select the download source after API authentication. (In some cases, it may take longer.)

[If you selected the wrong Google account to be linked:](#)

Redo the API Integration before starting the download.

Click "Unlock the button's disabled"; enter the right client ID and the client secret; and then authenticate again.

5. Selecting Download Source and Starting Backup (Backup Settings ②)

Check ✓

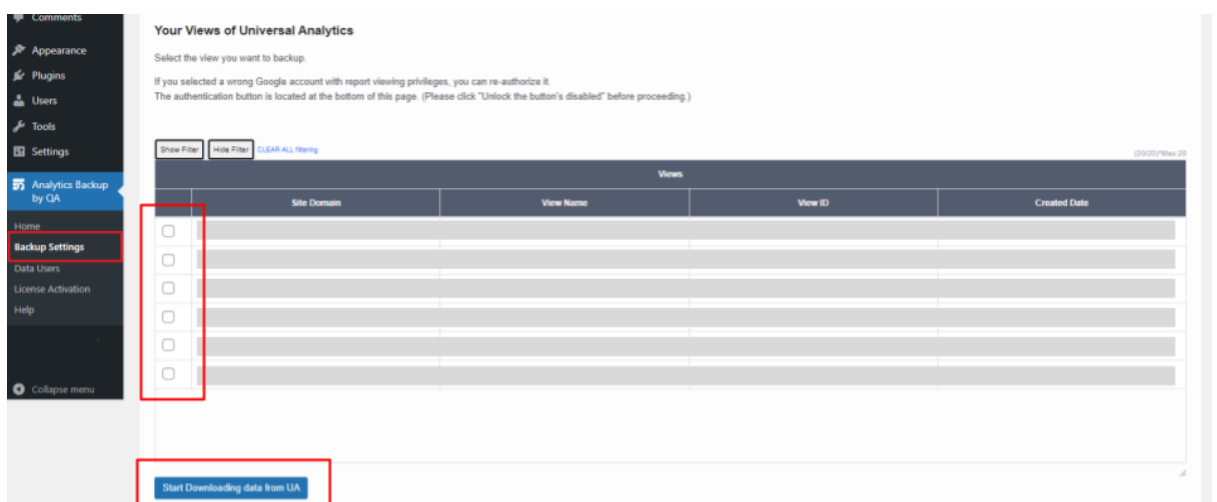

PHP “max_execution_time” and “memory_limit” are configured to appropriate values.

- Preparation Guide
https://ga-backup.com/wp-content/uploads/gabq-preparation-guide_EN.pdf
- [About “Backup Mode”](#)

Determine the data to be downloaded by selecting in "view" units of Google Universal Analytics.

⚠ *If you selected the wrong Google account to link, please make sure to re-link the account BEFORE starting the download. (Please refer to the previous section 4 for how to redo the process.)*

⚠ *If you don't see the list of "Your Views of Universal Analytics," it's possible that the Google Cloud application hasn't been configured correctly. Please return to step 4, which is Google API Integration, and ensure that both libraries, "Google Analytics Reporting API" and "Google Analytics API", are enabled.*

1) Select the data to backup.

The views for which the Google account linked to the API has access permission will be listed. (There is no grouping by analytics account or property.)

Select the views you want to back up.

▶ Please also read the "Note" in the red frame below.

2) Click "Start Downloading data from UA" to start backup.*

You don't have to select all data to back up in a step of "Backup Settings ② Selecting Data to Backup". You can select data to download also in the following "Backup Settings ③ Backup Status".

*** Limitations and consumption of view counts in the license.**

A License has a limit on the number of views which can be backed up.

The number of views in a license will be consumed at the start of downloading.

It cannot be undone after starting to download data even if you make a mistake in your view selection.

※NOTE※

When there are many views to choose from,
there will be a scroll bar on the right side of the view list.

After scrolling the scrollbar, there might be a momentary white screen flash.

Scrolling within the table might take 1-2 seconds for rows to become visible. Even when reaching the bottom of the table, due to scrolling effects, new rows might appear a few seconds later.

Please have patience and wait a few seconds to display the rows.

6. Backup Status and Additional Downloads (Backup Settings ③)

Universal Analytics Views				Backup Schedule			
Domain	View Name	View ID	Created Date	Time Required (estimated)	Estimated End Date	Progress	Sequential
●				Completed	Completed	100%	1
●				115 hours	2023-06-17 13:40:29	2%	2
●				-	-	-	3
●				-	-	-	4
●				-	-	-	5
●				-	-	-	6

"Time Required" and "Estimated End Date" are estimates. It may take longer than the estimated period due to the influence of server conditions and communication.

Colors of ● symbol next to Domain indicates:

- Green ··· Download Completed
- Yellow ··· Download in progress
- Red ··· Not downloading

★ Additional Backups

(e.g.) If you have a 10-view license and have only backed up 6 views, you can backup 4 more views.

Select the views you want to download from UA, select "Start backup" and click "Apply". (This will consume the counts of views in your license.)

- You can operate the checked views at once.

Universal Analytics Views				Backup Schedule			
Domain	View Name	View ID	Created Date	Time Required (estimated)	Estimated End Date	Progress	Sequential
<input type="checkbox"/>	●			Completed	Completed	100%	1
<input type="checkbox"/>	●			211 hours	2023-06-22 07:10:37	12%	2
<input type="checkbox"/>	●			115 hours	2023-06-27 02:10:37	2%	3
<input checked="" type="checkbox"/>	●			-	-	-	4
<input type="checkbox"/>	●			-	-	-	5

※NOTE※

When there are many views to choose from,
there will be a scroll bar on the right side of the view list.

After scrolling the scrollbar, there might be a momentary white screen flash.

Scrolling within the table might take 1-2 seconds for rows to become visible. Even when reaching the bottom of the table, due to scrolling effects, new rows might appear a few seconds later.

Please have patience and wait a few seconds to display the rows.

★ Backup with Highest Priority

The views are backed up in order from the top of the list.

(e.g.) To make the sequential (order of) No. 3 to No. 1, check the box, select "Move to the top," and click "Apply".

Universal Analytics Views				Backup Schedule				
	Domain	View Name	View ID	Created Date	Time Required (estimated)	Estimated End Date	Progress	Sequential
<input type="checkbox"/>					Completed	Completed	100%	1
<input type="checkbox"/>					211 hours	2023-06-22 07:10:37	12%	2
<input checked="" type="checkbox"/>					115 hours	2023-06-27 02:10:37	2%	3
<input type="checkbox"/>					--	--	--	4
<input type="checkbox"/>					--	--	--	5

7. About “Backup Mode”

If your server has less than 4GB of memory, which is a recommended specification,, GABQ will automatically operate in a “stable mode” that is optimized to conserve server memory. This is because on servers with less memory, attempting to retrieve up to 30,000 URLs per day, as allowed by the Google API specifications, could result in memory errors.

The number of URLs retrieved in relation to PHP's memory_limit value is outlined in Table A below.

GABQ initiates backups by downloading data from pages with higher traffic. If the number of URLs retrieved by GABQ, based on PHP's memory_limit value , is lower than the count of URLs reported in UA's 'All Pages' report, there might be pages with lower traffic that won't be included in the backup process. As a result, the overall number of backed-up pages could be reduced.

(Table A)

memory_limit	Approximate number of URLs retrieved per day
256M or more	1000-3000
512M or more	2000-5000
1000M or more	3200-8000
2000M or more	4000-10000
3500M or more	10000-30000

- This is an estimate when a server is used exclusively for GABQ.
- The values presented in the table are intended as approximations and should not be considered as absolute guarantees.

8. Creating and Managing Data Users

You can create exclusive users for particular backed up data.

When you log in to WordPress as a data user, you will see only the data view screens of GABQ. (You will not see or have access to any other admin menus except GABQ's data view screens.)

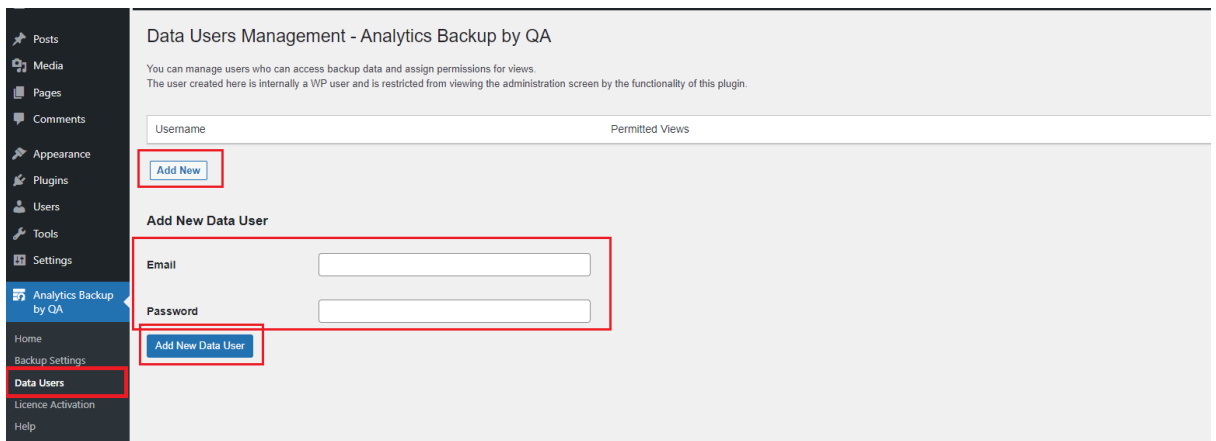

Only authorized data can be handled in GABQ. (Data users can view summary reports and download CSV files of data to which permission is given.)

▼ How to Create

1) Creating a data user

- (1) Go to "Data Users".
- (2) Click "Add New".
- (3) Enter the email address and password, and click "Add New Data User".
Email address and password are required to login WordPress.

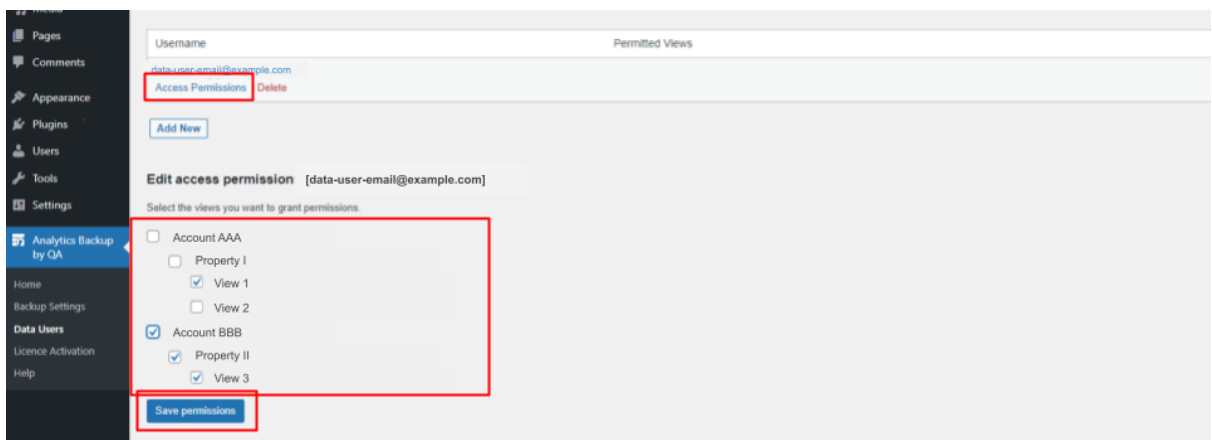

The password should be at least 12 characters long.
Simple ones like 123... or aaa... are considered vulnerable to WP and you may be asked to reset your password when logging in.

2) Granting Access Permissions

Assign which of the backup data each user can access.

- (1) Click "Access Permissions" of a user.
- (2) Check the data to be granted access to the user.
- (3) Click "Save permissions".

■ If You Lost the Password

(It is the same way to change the password of a WP user.)

You can change a user's password from WordPress admin > Users > User List.

A user can also change their password from the "Lost your password?" link on the WordPress login page. An email to change the password will be sent to the user.

■ To Delete a Data User

You can delete a data user from GABQ > Data Users > "Delete" of the user.

9. Supported Browsers

- Google Chrome

Updates of Analytics Backup by QA

GABQ will continue to undergo upgrades in the future.

There are two methods for updating GABQ: "Automatic" and "ZIP."
Primarily, updates will be performed using the "Automatic Update" method.

Method	Update Procedure	Update Management Number	
		Plugin Version	Update Number
Automatic Update	Not required (automatic)	<u>No changes</u>	Will change
ZIP Update	Manual update required	Will change	Will change (There might be instances where it reverts to 00)

Update Management Number

There are two types:

- Plugin Version
... Located in WordPress Dashboard > Plugins > Analytics Backup by QA section.

- Update Number
... GABQ's unique management number.
Can be found in Analytics Backup by QA > Help > Debug section under "update_no".

Update Procedure

- For automatic updates, there is no need to do anything in particular.
- In the case of updates through zip distribution, you will receive an email notification about the version update.

Please update GABQ in the following way:

▼ How to update with a zip

- 1) Download the latest version zip file from the download page of GABQ site.
- 2) Go to WordPress admin > Plugins > Add New > Upload Plugin.
Upload the new version zip file.
- 3) Select "Replace current version with uploaded one" to update.

If you need to do any special operations or settings, we will inform you by email or on the download page. Please update and configure according to the instructions provided.

WP version 5.9 or higher is required.

If your WP version is older than WP5.9, some problems may occur, such as the inability to update by zip upload and double installation of GABQ.

If you find that GABQ has been installed twice, please delete GABQ by FTP or other appropriate means. (Be sure to do this by someone familiar with the operation.) Please note that uninstalling one of them from the WP admin screen will result in the deletion of ALL the data that has been backed up until then.

* Using FTP to update GABQ is NOT recommended, especially if you are not very familiar with it.
